

Questions and answers from the 'Meet and greet', 7/6/21.

This zoom meeting was open to anyone interested, and 7 people attended.

Passive house ?

Our intention is to build to close to Passive House specification. For that reason the houses will be small terraces, both to save on construction costs and improve heat retention. They will also be orientated to make best use of solar heating.

Pedestrianisation ?

Parking on the edge of the site with vehicular access to the houses for emergencies and only where necessary for removals and such like. Keeping the site pedestrian creates safe spaces for children and fosters better relations between all the residents as you meet people just going about your daily business.

Styles of houses ?

As with other cohousing projects the houses will have all the features of a normal house so that the residents are not dependent on the communal house if they don't want to use it. All of the cohousing buildings are being designed by the same architect and will be to the same style so that the development has a coherent feel to it.
